ERROR: Cannot find function at 0x00001140
[0x00001140]> help

Welcome to radare2!

* Type '?' for the root list of commands.
* Append the '?' to any command to list the sub-commands.
* Prefix the command with '~' to avoid evaluating special chars
* The '@' modifier can be used for temporal seeks
* The '-' represents the internal grep. System pipes also work '|'.
* Multiple commands can be chained with ';'
* Run external scripts with the '.' source command (r2, r2js, python, ..)
* Use the '?*~...' command to inspect all the commands in visual mode

Use the 'e' command to change the configuration options.
* Run 'edit' to tweak your ~/.radare2rc script

Basic commands:

* s [addr] - seek to a different address
* px, pd - print hexadecimal, disassembly (pdf/pdr the whole function)
* wx, wa - write hexpairs, write assembly (w - write string)
* aaa, af - analyze the whole program or function
* /, /x - search for strings or hexadecimal patterns
* F~... - search for strings or hexadecimal patterns
* q - quit (alias for ^D or exit)
